Preparation

Required Tools

The OverWatch has been designed to be fitted using basic workshop tools. Shown below is a list of tools required to complete the installation.

Item	Tool / Description
1	Electric Drill
2	Centre punch
3	Hammer
4	Side Cutters
5	Drill 5.0mm
6	Drill 6.0mm
7	Metric sockets or spanners
8	Needle nose pliers
9	Screw drivers

Installation Time

The suggested time required to install the OverWatch is as detailed below.

Task	Estimated Time (Minutes)
Open the operator control box	1
Drilling of all mounting holes for the various components	13
Mechanical assembly	10
Electrical assembly	10
Post installation system tests	10
Close the operator control box	1
Total	45

Installation Instructions

Operator Sensor

Step	Description	Diagram
1.	Remove the control box from the metal housing.	<image/>
2.	Drill two 5.2mm holes to mount the operator sensor L bracket as shown in the image. Hole 1 - 75mm from the top edge. Hole 2 - 98mm from the top edge

Post Installation Configuration

Overview

After the system has been installed it must be configured with the parameters to suit the machine. Follow the instructions below to configure the OverWatch.

Minimum system requirements

Any smart phone, tablet or laptop that meets the following requirements:

- The device can connect to a Wi-Fi access point
- The device has an up to date web browser installed. Firefox, Chrome or Safari are recommended.

Wi-Fi Connection & Web Page Access

To enable the Wi-Fi connection on the OverWatch to complete the configuration follow the steps below.

- 1. Power down the platform control box with the ESTOP
- 2. Wait 5 seconds
- 3. Power up the platform control box with the ESTOP
- 4. While standing in front of the operator sensor, switch on the OverWatch
- 5. As the welcome chime starts to play, cover the sensor. The LED will flash white then black to acknowledge.
- 6. Remove your hand from the sensor. The LED will flash white then black to acknowledge.
- 7. After covering then uncovering the sensor this way 2 more times, "Wi-Fi On" will be announced
- 8. On your Wi-Fi enabled device (laptop, tablet, smartphone, etc), show the available wireless networks
- 9. Select the wireless network (starts with "overwatch") to connect to the OverWatch
- 10. When prompted, enter the password 12345678
- 11. Open your preferred web browser (Chrome, Firefox, Safari)

Enter the following into the address bar <u>http://192.168.4.1</u> to open the OverWatch main page

Machine Model Selection

Follow the instructions below to configure the OverWatch.

- 1. Select the Setup option
- 2. If there is a password field at the bottom of the page, follow the instructions in Change Model Configuration to obtain the password and enter the password field
- 3. Select the EWP Model from the drop-down list and click Set
- 4. Click on Proceed to test to begin the installation test

éq	ŝŝ		
	OverWatch Setup		
		Haulotte DX Series Pre 2010 V	
		Serial number: 6253E-2001-9999	
		No control box set.	
		Proceed to test	

Installation Test

After the model configuration has been set or updated an Installation Test must be performed. This will ensure the installation has been correctly performed and the OverWatch is functioning correctly. Follow the instructions on the web page to complete the Installation Test.

eqss			
OverWatch Installation	Test		
Joystick Elevate	OK		
Drive	OK		
Trigger	OK		
Horn	OK		
Cutout	OK		
Installation test passed			

Change Model Configuration

To reconfigure the OverWatch for a different model requires an authorisation password. The authorisation password is generated from the EQSS website. The EQSS website requires a login username and password, contact EQSS for these details.

Follow the instructions below to obtain an authorisation password. It is important to note that each ECU has a unique serial number and a unique password.

- 1. Open your web browser and enter the following into the address bar <u>http://www.eqss.com.au/overwatch</u> to open the Login page
- 2. Enter your username and password
- 3. Enter the EUC serial number which is shown on the setup page or on the ECU serial number sticker, also enter the owner and model details of the EWP and then click Generate Hash
- 4. The generated Hash code or password can be used to change the model configuration.

28/11/2023 Model6253 OverWatch[™] Installation Manual

Document # DO001522

System Settings

Default Parameters

The OverWatch is configured with the following default parameters.

Setting Name	Description	Default
max_safe_velocity	This is the velocity threshold for the cutout in cm/s for drive mode.	95
max_safe_displacement	This is the maximum permitted distance in cm the operator may be away from the calibration position in drive mode.	50
max_safe_velocity_elevate	This is the velocity threshold for the cutout in cm/s for elevate mode.	75
max_safe_displacement_elevate	This is the maximum permitted distance in cm the operator may be away from the calibration position in elevate mode.	50
fwddispadj	The proportion of the calibration distance toward the sensor permitted to the operator.	0.65
fwdveloadj	The coefficient to apply to the maximum allowable velocity when the movement of the operator is toward the sensor.	1.0
zone_obstruction	If the lidar sensor reading is below this, the lidar is considered to be obstructed (with paint or thick coat of dust) and the system is cutout until the obstruction is cleared.	5
zone_minimum	The minimum calibration distance. If the operator is closer to the sensor than this "operator zone" will be announced.	30
zone_maximum	The maximum calibration distance. If the operator is further from the sensor than this "operator zone" will be announced.	120
adc_elevate_threshold	Threshold value for the elevate ADC input.	1100
adc_drive_threshold	Threshold value for the drive ADC input.	1100
adc_trigger_threshold	Threshold value for the trigger ADC input.	1100
adc_joystick_fwd_threshold	Forward threshold value for the joystick ADC input.	1550
adc_joystick_bwd_threshold	Backward threshold value for the joystick ADC input.	1350
throttle_time	Period after the trigger is pressed (ms) during which initial velocity reading is computed.	500
driving_state_timeout	Mode selection switch timeout (ms)	12000

Replacement Parts

Replacement parts for this OverWatch kit are available from EQSS, please email sales@eqss.com.au

Shown below are the part numbers for the major components included in this model specific kit.

Part Number	Description
AS002554	OverWatch - Complete kit for Haulotte DX (Pre2010) Series
AS001910	OverWatch - Operator Sensor with M20 gland
AS001916	OverWatch – Electronic Control Unit (ECU)
AS002252	OverWatch – Haulotte DX (Pre2010) Harness
AS002326	OverWatch - Sensor Guard V2
ME001818	OverWatch – L Bracket 30/45
