

eqss™ Gen-3 LMS Telehandler Load Management System

Installation Manual for MLT840 Manual Tool Recognition

WARNING!
DO NOT HIGH PRESSURE
WASH ANY OF THE GEN3
COMPONENTS. FAILURE TO
FOLLOW THIS WARNING
WILL VOID WARRANTY

*****Do Not Swap Components between Gen3-LMS kits*****

When installing multiple Gen3-LMS kits, make sure the serial number on the sticker matches the serial number on the machine.

*****Failure To Follow Installation Manual Will Void Warranty*****

Documentation Conventions

The list below highlights important documentation conventions.

Text presented in this manner is intended to provide the user with some general information. The user should ensure information presented in this manner is clearly understood.

Text presented in this manner provides the user with information to assist in completion of the current procedure being explained.

Text presented in this manner indicates that a failure to follow directions could result in damage to equipment, loss of information, bodily harm, or loss of life.

Important Information

Information contained in this publication regarding this device's applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that the application or our equipment meets with your specifications.

EQUIPMENT SAFETY SYSTEMS MAKE NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO, IT'S CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE.

Equipment Safety Systems disclaims all liability arising from this information and its use. Use of Equipment Safety Systems' products as critical components in life support systems is not authorised except with express written approval by Equipment Safety Systems. No licenses are conveyed, implicitly or otherwise, under any Equipment Safety Systems intellectual property rights.

Tools Required for Installation

The tools required to perform the installation of the Gen3-LMS are listed below

- Pencil or Texta
- Drill
- Drill bits
 - 3.3 mm
 - 4.5 mm
 - 5 mm
 - 6.25 mm
 - 6.8 mm
 - 8.5 mm
- Centre punch
- Tap T-Handle
- Taps
 - M6
 - M7 x 0.75
 - M8
- Drill and tap oil
- Metric Allen keys
- Phillips Head screw driver
- Spanners and sockets
 - 7 mm
 - 10 mm
 - 13 mm
- Loctite thread locker
- Side cutters
- Stanley knife
- Crimpers
- Wire strippers

Installation Index

The components and cables of the Gen-3 Telehandler Load Management System are outlined in the tables below. The following pages show where the components are installed and the cable routing.

See the appropriate manual section for a detailed installation description for each component.

Refer to this section for any component placement or cable routing issues

<i>Item</i>	<i>Component Description</i>
1	Cable Reeler
2	Main Lift Cylinder Pressure Sensors
3	Compensation Cylinder Pressure Sensors
4	Can Pressure Input Module (CPIM)
5	Forward Camera
6	Light Tower
7	Rear Camera
8	Can Cabin Interface Module (CCIM)
9	Display Module
10	SPU Module
11	User Control Dial
12	Joystick Connection X67

Table 1: Component Installation Index

<i>Colour</i>	<i>Cable Description</i>
Yellow	Boom Cable
Dark Green	Main Cylinder Pressure Sensor Cables
Dark Blue	Compensation Cylinder Pressure Sensors Cables
Light Blue	Forward Camera Cable
Violet	Light Tower Cable
Aqua	Rear Camera Cable
Dark Yellow	CCIM Cable
Light Green	Cutout Harness
Red	Display Cable
Orange	User Input Control Cable
Brown	Machine Input Harness

Table 2: Cable Installation Index

Illustration 1: Machine Boom

Note: Old Light Tower Is Shown

Illustration 2: Machine Chassis

Covers

Remove the following covers before starting the installation

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	Remove the rear cover behind the boom.	
1.	Remove the side panel next to the cabin under the boom.	
2.	Remove the cover behind the cabin	

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	Inside the cabin remove the dashboard display.	

Table 3: Cover removal

Cable Reeler Installation

The cable reeler is used to measure the boom extension to determine the maximum lifting capacity.

A false N07 fault can occur if the boom jumps off the stow switch due to pressurising the hydraulic system and without operating the boom extension control. Ensure the stow switch arm is correctly adjusted to prevent this error.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Drill and tap the holes for the cable reeler according to the mounting diagram on page 15.</p> <p>Mount on the supplied standoffs using the supplied bolts and washers.</p>	
2.	<p>Drill and tap an M8 hole for the cable anchor. Ensure the cable anchor is positioned so the cable runs in line with the boom.</p> <p>Mount the cable anchor and attach the cable.</p>	
3.	<p>Drill and tap the M6 holes for the stow switch trigger bracket.</p> <p>Mount the stow switch trigger bracket using the supplied M6 x 12 mm bolts and washers.</p> <p>Adjust the length of the trigger plate to ensure the stow switch is pressed when the boom is retracted.</p>	

Step	Description	Diagram
4.	Connect the supplied M12 10 metre cable (CB001027) into the cable reeler connection.	
5.	<p>Secure the cable to the cable reeler bolt using the supplied p-clip as shown.</p> <p>Run the cable under the protective cover down the top of the boom.</p> <p>Cable tie to the flexible hydraulic hoses down to the chassis. Make sure the cable isn't pinched or stretched when the boom is raised or lowered.</p> <p>Run the remainder of the cable out the hole below the lift cylinder towards the rear of the machine and cable tie with the other cables during External Cable Completion on page 32.</p>	

Table 4: Cable Reeler Installation

For further details on running the boom cable refer to the Installation Index on page 7

Cable Reeler Mounting Position

Illustration 3: Cable Reeler Mounting Position

Pressure Sensor Installation

The hydraulic pressure sensors are used to measure the lifting load of the telehandler.

Failure to tighten the bolts to the correct torque on the pressure manifold may result in a pressure failure on the counterbalance valve causing an uncontrolled fall of the boom.

The main lift cylinder pressure sensor installation will differ if configured with the Boom Suspension option. Check the pictures of the counterbalance valve under each section to determine the configuration.

Main Lift Cylinder – Standard Configuration

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Raise the boom to approximately 65 degrees, to access the bolts on the counterbalance valve.</p> <p>Support and secure the boom using an A Frame or similar apparatus. It must support at least 2 tons.</p> <p>Apply the handbrake and insert chock under wheels.</p> <p>Remove the counterbalance valve on the side of the hydraulic lifting ram.</p> <p>Removing the counterbalance valve will release the hydraulic pressure which may result in a spray of oil.</p> <p>Secure the pressure manifold using the supplied 70 mm bolts and seals. Tighten the bolts for the manifold to 25 NM using a torque wrench.</p> <p>Start the machine, pressurise the boom and check for leaks.</p>	

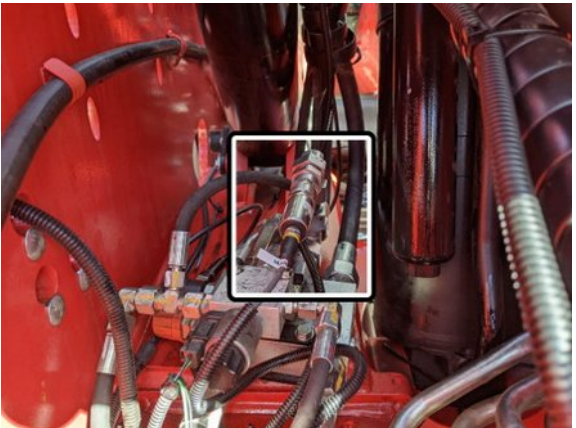

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
2.	<p>Connect the supplied M12 4 metre cables (CB001026) into each of the pressure sensors.</p> <p>Cable tie to the flexible hydraulic hoses connected to the main lift cylinder. Make sure the cable isn't pinched or stretched when the boom is raised or lowered.</p> <p>Run the remainder of the cable out the hole above the rear axle under the lift cylinder towards the rear of the machine and cable tie with the other cables during External Cable Completion on page 32.</p>	

Table 5: Main Lift Cylinder – Standard Configuration

For further details on running the pressure sensor cables refer to the Installation Index on page 7

Main Lift Cylinder – Boom Suspension Option

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Raise the boom and support and secure the boom using an A Frame or similar apparatus. It must support at least 2 tons.</p> <p>Apply the handbrake and insert chock under wheels.</p> <p>Remove the plug in the PX port of the on the counterbalance manifold on the lift cylinder.</p> <p>Removing the plug from the counterbalance manifold will release the hydraulic pressure which may result in a spray of oil.</p> <p>Connect the supplied pressure sensor into the PX port of the counterbalance manifold as shown in the picture.</p>	 <p>View from behind the cabin</p>
2.	<p>Disconnect the hose coming from the main rod pressure line into the top left side of the counterbalance manifold mounted on the chassis.</p> <p>Connect the supplied hydraulic tee connection and pressure sensor into the main rod pressure line.</p> <p>Ensure the pressure sensor is aligned as shown in the picture, so the pressure sensor is not crushed when the compensation cylinder is moved.</p> <p>Start the machine, pressurise the boom and check for leaks.</p>	 <p>View from under the compensation cylinder behind the machine</p>

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	<p>Connect the supplied M12 4 metre cables (CB001026) into each of the pressure sensors.</p> <p>Cable tie the main head pressure sensor cable to the flexible hydraulic hoses connected to the main lift cylinder. Make sure the cable isn't pinched or stretched when the boom is raised or lowered.</p> <p>Run the remainder of the cable towards the rear of the cabin and cable tie with the other cables during External Cable Completion on page 32.</p>	

Table 6: Main Lift Cylinder – Boom Suspension Option

For further details on running the pressure sensor cables refer to the Installation Index on page 7

Compensation Pressure Sensors

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	Install the pressure sensor with the U shaped hydraulic connection into the rod of the compensation cylinder	 <p data-bbox="863 752 1425 819">View from behind the cabin towards the center of the machine</p>
2.	<p data-bbox="272 835 735 947">Install the head compensation pressure sensor into the compensation cylinder</p> <p data-bbox="272 981 788 1059">Start the machine, pressurise the boom and check for leaks.</p> <p data-bbox="272 1093 820 1205">Connect the supplied M12 4 metre cables (CB001026) into each of the pressure sensors.</p> <p data-bbox="272 1238 834 1384">Run the snake tube and cables towards the cabin and cable tie with the other cables during External Cable Completion on page 32.</p>	 <p data-bbox="863 1267 1414 1335">View from under the boom towards the rear of the machine</p>

Table 7: Compensation Pressure Sensor Installation

For further details on running the pressure sensor cables refer to the Installation Index on page 7

Reverse Camera

The rear camera video is displayed on the screen when the machine is in reverse gear to allow the operator to see behind the telehandler while reversing.

Do not disconnect the camera power connection while the system is operating as this can damage the fuse.

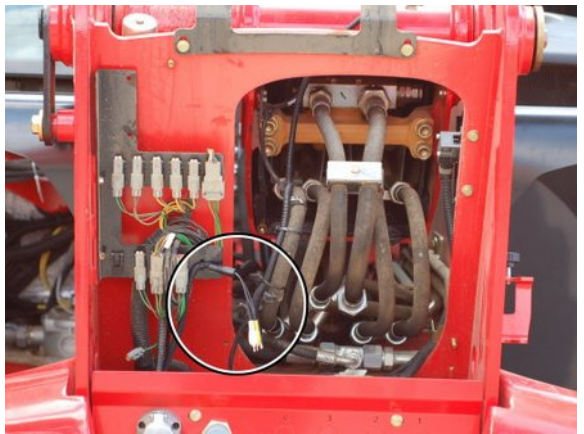

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Remove the cover at the rear of the machine.</p> <p>Drill a 31mm hole in the location shown. Making sure to leave enough room for a license plate</p> <p>Insert the camera through the hole and adjust the angle using the alignment washers.</p> <p>Place the supplied high pressure warning decal next to the reverse camera.</p>	
2.	<p>Connect the camera power and signal connectors to the supplied 5m camera cable (CB001032).</p> <p>Note; The white connector is not used.</p> <p>Secure the camera cable using a single cable tie to maintain the connector location.</p> <p>Run the remainder of the cable towards the cabin and insert into snake tube with the boom cable during External Cable Completion on page 32.</p>	

Table 8: Reverse Camera Installation

The camera's viewing angle may need to be adjusted once the system is installed and the display is operational.

Once the cable has been secured with a cable tie disconnect the cable to remove the rear cover until the installation is finalised

For further details on running the camera cable refer to the Installation Index on page 7

Cutout Cable Harness

Isolate the main battery before connecting into the machine wiring

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Remove connector X148 from the ECU MP1.</p> <p>Note: The location of the ECU modules may be different from the photo.</p>	
2.	<p>Pull the connector on the left of the connector to disconnect from the ECU.</p> <p>Slide the protective cover off the end of the connector to access the wires.</p>	
3.	<p>Remove the pin support bracket from the left connector, by levering the corners with a small screwdriver.</p>	

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
4.	Remove the blanking pin from the connector in slot 4 and insert the blue wire from the cutout harness. Note: The pin numbers are written on the front of the connector	
5.	Replace the pin support bracket and the protective cover. Replace any tape that was removed to secure the snake tube of the protective cover. Reattach the connector to the ECU module.	
6.	Run the cable from behind the cabin to the side of the chassis following the existing snake tube.	
7.	Run the snake tube and cables towards the cabin and cable tie with the other cables during External Cable Completion on page 32.	

Table 9: Cutout Cable Harness Installation

For further details on running the cutout cable harness refer to the Installation Index on page 7

The green wire on the wire harness is not needed to complete the installation for this machine configuration.

Forward Camera

The forward camera video is displayed on the screen when the machine is in forward gear to allow the operator to see past the boom to obstructions that would damage the right front tyre.

Do not disconnect the camera power connection while the system is operating as this can damage the fuse.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Mount the camera to the side mirror using the p-clips as shown.</p> <p>Secure using two M6 nuts.</p>	
2.	<p>Connect the camera power and signal connectors to the supplied 5m camera cable (CB001032).</p> <p>Note; The white connector is not used.</p> <p>Run the cable along the mirror post, cable tie every 100 mm down the chassis.</p> <p>Run the cable along the same path as the headlight cable under the chassis to the side of the cabin. Cable tie to the headlight cable every 150 mm to 200 mm.</p> <p>Complete the cable installation during External Cable Completion on page 32.</p>	

Table 10: Forward Camera Installation

The camera's viewing angle may need to be adjusted once the system is installed and the display is operational.

For further details on running the camera cable refer to the Installation Index on page 7

Signal Light Installation

The signal light warns other workers when the telehandler is lifting loads close to its maximum capacity.

Ensure the power supply voltage is greater than 13.5V otherwise the signal light may not illuminate correctly.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	Mount the signal light on the top of the roof past the roof window towards the cabin door.	
2.	<p>Run the cable towards the boom side of the roof and push through the hole near the window wiper.</p> <p>Note: It might be necessary to cut a hole in the plastic roof cover to fit the cable.</p> <p>Run the cable under the cover towards the rear corner.</p>	

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	<p>Run the cable along the pipes under the cover towards the chassis.</p> <p>Cable tie with the other cables during External Cable Completion on page 32.</p>	

Table 11: Signal Light Installation

Machine Input Harness

Isolate the main battery before connecting into the machine wiring

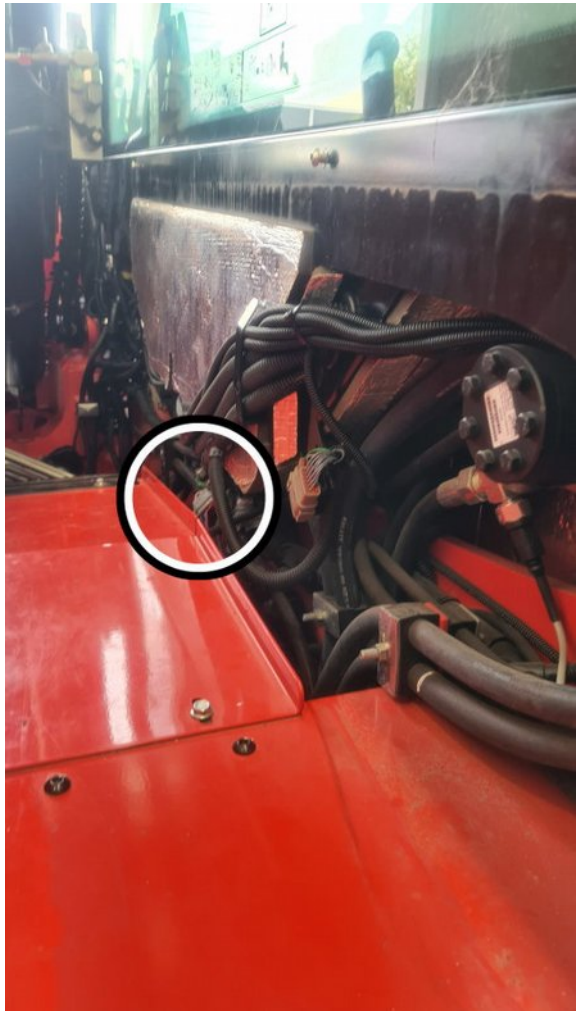

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Locate the 12 pin connector under the boom next to the cabin, that connect into the joystick.</p> <p>Connect the 12 pin tee connector into X67.</p> <p>Run the other end of the cable with the 4 pin connector towards the cabin and cable tie with the other cables during External Cable Completion on page 32.</p>	

Table 12: Joystick Cable Harness Installation

For further details on running the machine input harness refer to the Installation Index on page 7

Can Pressure Input Module (CPIM)

The CPIM is responsible for processing the information sent from the pressure sensors.

Accidentally swapping the pressure sensor connections will not damage system and can be determined if the display is showing a negative load.

Do not plug the pressure sensor cable into the far right side boom cable. This will damage the system.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Drill and tap two M8 holes for the CPIM bracket in the side of the chassis.</p> <p>Ensure that cover can be installed once the CPIM is mounted</p> <p>Mount using the supplied M8 x 12mm bolts and washers.</p>	
2.	<p>Connect the cables for the pressure sensors and boom cable to the CPIM as described on the label.</p> <p>Note: The CCIM cable will be installed during External Cable Completion on page 32.</p>	

Table 13: Can Pressure Input Module (CPIM) Installation

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
4.	<p>Run the CCIM, signal light, cutout harness, machine input harness and camera cables up through the hole into the cabin under the dashboard.</p> <p>Note: Pull the entire length of cable through into the cabin, excess cable will be stored under the dashboard cover in the cabin.</p>	

Table 14: External Cable Completion

For further details on running the cables refer to the Installation Index on page 7

Display Installation

The display shows the current safety status of the telehandler.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Attach the display bracket to the level indicator in the top right corner using the supplied bolts and nuts.</p> <p>Attach the display to the bracket and tighten the grub screw</p>	

Table 15: Display Installation

Adjust the display bracket for optimal viewing angle once the display is powered

If the M12 screw lock connectors on the display are over tightened it will twist the connector pins attaching the connector to the PCB. See Appendix A: Attaching Display Connectors on page 47 for the correct method of attaching to the display connectors.

If the clip-on ferrites were removed from the CCIM and user control cables. See Appendix B: Reattach Ferrites and page 51 for the correct reattachment position.

User Control

The user control consists of a 5 button switch mounted in the dashboard.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	Drill a 39 mm hole into the cover in front of the joystick and install the user control. Note: Ensure the cover can be reinstalled without hitting the user control.	
2.	Run the cable through under the dashboard with the other cables.	

Table 16: User Control Installation

Can Cabin Interface Module (CCIM)

The CCIM connects the system into the machine electronics.

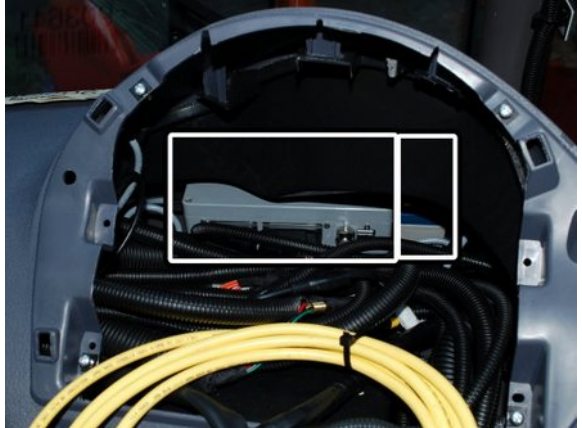

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Position the backup battery (to the right of the CCIM) underneath the dashboard using double sided velcro tape.</p> <p>Position the CCIM to the left of the backup battery using double sided velcro tape.</p> <p>Remove the battery and CCIM from the velcro to allow the connections to be completed. Reattach to the velcro in the section Finalisation on page 40.</p>	

Table 17: CCIM Installation

Cabin Loom

The cabin loom connects the CCIM to the machine connections and the other modules of the system.

 Do not disconnect the camera power connection while the system is operating as this can damage the fuse.

 Isolate the main battery before connecting into the machine wiring

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	Connect the CCIM and signal light cables to the M12 connectors on the CCIM. Note: It doesn't matter which of the M12 connectors the CCIM and signal light cables are plugged into.	
2.	Connect the cabin loom to the CCIM bulk head connectors	

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	<p>Connect the camera power and signal cables to the cabin loom.</p> <p>Note: The white connector is not used.</p>	
4.	<p>Attach the ring lug from the cutout cable to the ground lug inside the dashboard.</p>	
5.	<p>Run the 8 pin cable from the CCIM and the 5 pin cable from the user control through the gap between the window and the dashboard.</p> <p>Connect into the 8 and 5 pin connectors into the display</p>	
6.	<p>Run the cable through snake tube.</p> <p>Place cable tie points on the side of the window.</p> <p>Cable tie the snake tube to the cable tie points.</p>	

Table 18: Cabin Loom Installation

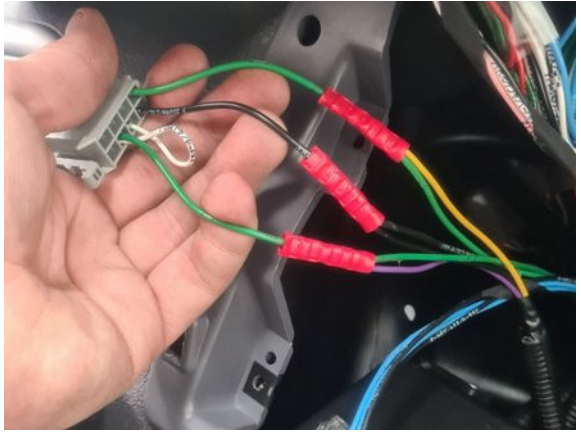

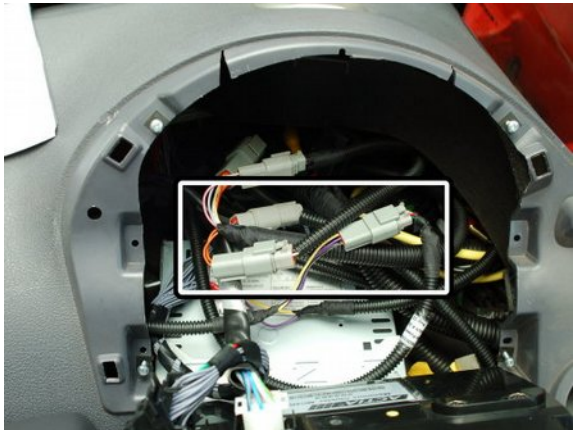

If the M12 screw lock connectors on the display are over tightened it will twist the connector pins attaching the connector to the PCB. See Appendix A: Attaching Display Connectors on page 47 for the correct method of attaching to the display connectors.

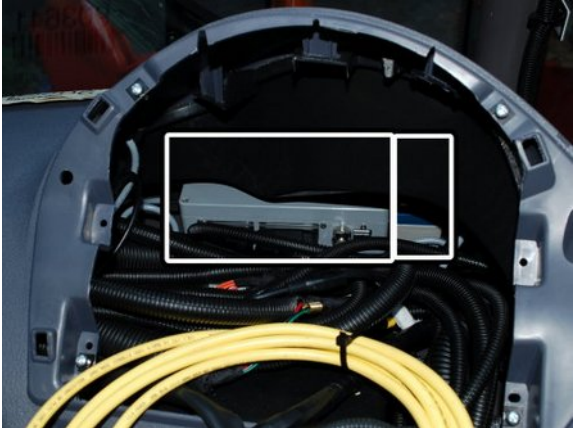

If the clip-on ferrites were removed from the CCIM and user control cables. See Appendix B: Reattach Ferrites and page 51 for the correct reattachment position.

Finalisation

This section will complete the final power connections to power the system and finish any additional items.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>								
<p>1.</p>	<p>Splice the wires from the power connector into the grey radio power connector according to the table below.</p> <table border="1" data-bbox="308 667 804 813"> <thead> <tr> <th>Terminal #</th> <th>Wire Colour</th> </tr> </thead> <tbody> <tr> <td>8</td> <td>Black</td> </tr> <tr> <td>4</td> <td>Violet</td> </tr> <tr> <td>7</td> <td>Yellow</td> </tr> </tbody> </table> <p>Secure the splice joins using electrical tape</p> <p>Ensure the correct fuses are installed in the machine's cabin fuse box to enable the radio power.</p>	Terminal #	Wire Colour	8	Black	4	Violet	7	Yellow	 <p>Grey Radio Connector (Plug Side View)</p> 
Terminal #	Wire Colour									
8	Black									
4	Violet									
7	Yellow									
<p>2.</p>	<p>Connect the 4 pin female connector from the machine input harness, the 6 pin male connector from the cutout harness and the 3 pin connector from the power harness to the cabin loom connectors.</p> <p>Note: The 2 pin and 12 pin connectors are not used.</p>									

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	<p>Connect the spade lug on the black wire to the negative (black) battery terminal.</p> <p>Connect the spade lug on the blue wire to the positive (red) battery terminal.</p>	
4.	Attach the backup battery and CCIM to the velcro strips installed earlier.	
5.	Coil up the extra cables and store underneath the dashboard cover.	
6.	<p>Reconnect the main battery from the isolation switch.</p> <p>Turn the machine onto first stage /accessories and ensure the system is activated.</p>	

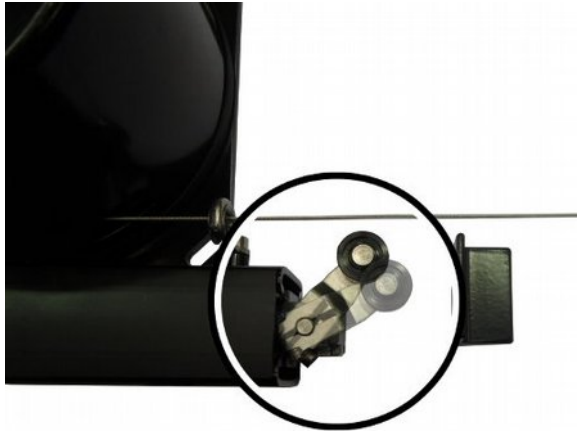

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
7.	<p>Adjust the display bracket for optimal viewing</p> <p>Set the machine into forward gear to activate the forward camera. Adjust the forward camera so the front right wheel is visible.</p> <p>Set the machine into reverse gear to activate the reverse camera. Adjust the reverse camera so the video is level.</p>	
8.	<p>Operate the boom movement controls to test if a false N07 fault occurs.</p> <p>If a N07 fault does occur, adjust the arm on the stow switch forwards towards the stow switch trigger.</p> <p>Note: The actual switch arm orientation may differ from the picture.</p>	
9.	<p>Perform a final check on all the cabling and sensors.</p> <p>Replace all the covers</p>	

Table 19: Finalisation

 Make sure to update the machine ECU software for Australian configuration using the Manitou pad.

Complete the system checklist once installation has been completed.

Set Time & Sensor Calibration

Once the installation is complete, the time will need to be set and the sensors will require calibration.

A sensor calibration must be performed once the cable reeler and CPIM have been mounted. If the cable reeler or CPIM have been moved/repositioned a recalibration must be performed

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Press Enter on the user control dial to enter the menu system.</p> <p>Press the arrow buttons to select System Menu.</p> <p>Press Enter to select the menu.</p>	<div style="border: 1px solid black; padding: 5px;"> <p style="margin: 0;">Main Menu</p> <hr/> <p style="margin: 0;">Attachment Selection Menu</p> <div style="background-color: #4a7ebb; color: white; text-align: center; padding: 5px; margin: 5px 0;"> <p style="margin: 0;">System Menu</p> </div> <p style="margin: 0;">Exit Menu</p> <hr/> </div>
2.	Select Advanced Menu	<div style="border: 1px solid black; padding: 5px;"> <p style="margin: 0;">System Menu</p> <hr/> <p style="margin: 0;">Volume / Brightness</p> <hr/> <p style="margin: 0;">Status Menu</p> <hr/> <p style="margin: 0;">Diagnostics Menu</p> <hr/> <p style="margin: 0;">System Tests</p> <div style="background-color: #4a7ebb; color: white; text-align: center; padding: 5px; margin: 5px 0;"> <p style="margin: 0;">Advanced Menu</p> </div> <p style="margin: 0;">Return to Main Menu</p> <hr/> </div>

<i>Step</i>	<i>Description</i>	<i>Diagram</i>														
3.	Enter the password (Default Password: 2-8-4)	<table border="1"> <thead> <tr> <th colspan="2">Enter Password</th> </tr> </thead> <tbody> <tr> <td>Number 1</td> <td>2</td> </tr> <tr> <td>Number 2</td> <td>8</td> </tr> <tr> <td>Number 3</td> <td>4</td> </tr> <tr> <td colspan="2">Submit Password</td> </tr> <tr> <td colspan="2">Return to System Menu</td> </tr> </tbody> </table>	Enter Password		Number 1	2	Number 2	8	Number 3	4	Submit Password		Return to System Menu

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
6.	Scroll to the next page and select Save to store the new time/date and return to the Advanced Menu.	<p>The diagram shows a menu with a blue highlighted button labeled "Save" at the top. Below it is a text option labeled "Return to Advanced Menu".</p>
7.	Select Sensor Calibrations	<p>The diagram shows a menu titled "Advanced Settings" with several options: "Set Time / Date", "Sensor Calibrations" (highlighted in blue), "Change Language", "Change Password", and "Return to System Menu".</p>
8.	Select Calibrate Carrier Angle and then follow the instructions on the screen to complete the calibration. Repeat for Calibrate Boom Angle and Calibrate Boom Length.	<p>The diagram shows a menu titled "Sensor Calibration Menu" with four options: "Calibrate Carrier Angle" (highlighted in blue), "Calibrate Boom Angle", "Calibrate Boom Length", and "Return to Advanced Menu".</p>

Table 20: Sensor Calibration

Appendix A: Attaching Display Connectors

The procedure below describes the correct method of attaching the cables to the screw lock connectors on the display.

If the M12 screw lock connectors on the display are over tightened, it will twist the connector pins attaching the connector to the PCB.

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Connect the cable from the user control to the top 5 pin connector on the display.</p> <p>Connect the cable from the CCIM to the bottom 8 pin connector on the display.</p>	
2.	<p>Line up the alignment hole on the cable connector with the alignment notch on the display connector.</p>	

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
3.	Push the female connector from the cable into the male connector on the display.	
4.	Rotate the nut on the female connector by hand in a clockwise direction, until the tension on the nut starts to increase.	
5.	Push the cable in again and repeat steps 3 and 4 until the connector is secure.	

Table 21: Install Display Connector Procedure

The method to correctly secure the cable is to push-twist-push-twist until the connector is fully inserted and secure. This will minimise the twisting force applied to the connector.

Below is a picture of a damaged connector on the PCB inside the display. This damaged occurred because the connector was over tightened.

Illustration 4: Damaged Display Connector

Do not use any tools to tighten the connector.

Illustration 5: Do Not Use Tools To Tighten Connector

Do not over-tighten the nuts on the back of the display connectors. These nuts should only be hand tightened. If the nuts are overtightened it will damage the PCB inside the display.

Illustration 6: Do Not Over Tighten Nuts

Damage to the display connectors is not covered under warranty.

Appendix B: Reattach Ferrites

If the clip-on ferrites on the displays are removed during installation, they will need to be reattached as shown in the procedure below.

 If the ferrites are not reinstalled or attached in the specified location the Gen3-LMS kit will not meet the AS/NZS CISPR 22:2006 certification.

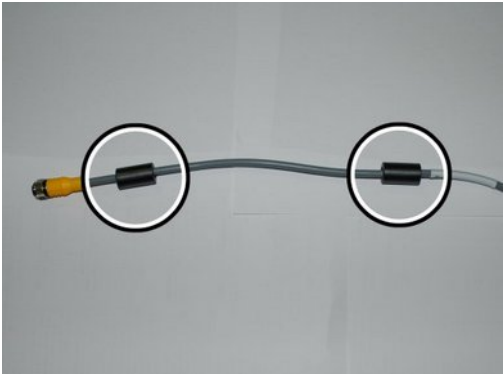

<i>Step</i>	<i>Description</i>	<i>Diagram</i>
1.	<p>Attach the two clip-on ferrites at a location of 60 mm and 260 mm from the start of the connector to the start of the ferrite.</p> <p>Do this for both the CCIM and user control cables that plug into the display.</p>
